Adobe threw up an animated monster of a shot of Photoshop on Monday, but its real intent was to display all the incredible power that Photoshop has to offer photographers, including the new Creative Cloud subscription offerings . The company obviously didn't want customers to hold on to old software to 'save' money, so it included an option for discarding the previous version of the program. Evelyn Qin lead the charge here and explained on the Adobe blog that it was part of a programmer's effort to make sure compatible file types would be preserved."You can generate single or a few high resolution files, or you can generate hundreds of them, but as you do you will now be prompted to move to the next phase and dive into the next chapter of your exploration," she said. "Above all, you will be guided through the process of making your creations your own. This will make the transition seamless and as enjoyable as you experienced the first time you met a friend." Adobe is expected to announce next week a totally new Adobe Creative Cloud app, a creation suite that includes some of its popular professional apps, including Lightroom, InDesign, and Soundtrack. Along with Adobe Photoshop, the anticipated applications include the usual suspects for design, video, and type: Edge, Illustrator, Premiere, and Audition. Pricing and release date are still up in the air, but Creative Cloud will likely remain an annual subscription at $10 per app. If you don't already use Photoshop, and wish to learn a bit more about this image editing application, beginning Photoshop doesn't get much easier with a fly through of navigation options and keyboard shortcuts.
