Using Photoshop CS for the last twelve years is like being completely in tune with the rhythm of a dance. Every single loopkick, step-hop, and musical turn. But is taking the leap to Photoshop CC worth it? Finally, lets take a look at one of the most high-profile apps we reviewed last week. **Creative Cloud for iPad Pro** is one of several apps included with Creative Cloud, the subscription-based suite of Adobe creative tools. Some of the others are Adobe Vise, Adobe Premiere Pro, Adobe After Effects, Adobe XD, and Adobe Photoshop. Unlike Creative Cloud for Retina Macs, Creative Cloud for iPad Pro does not bundle any of a photographer's creative tools. Users can't explore what Adobe offers online, but they can download the app and begin using it. Some of the tools are provided for free, and some are single-purchase products, as with any Adobe app. As mentioned earlier, the Creative Cloud subscription for an iPad Pro is as easy as downloading the app and logging in. However, the app must be running in the background to charge the iPad. If the app is closed while the iPad is charging, the device won't start again until the app is restarted. When Creative Cloud for iPad Pro starts, it allows you to set up your preferred billing information. It'll then prompt you to log into your existing Creative Cloud account if you're already a member of Adobe, or if you wish to begin signing up for a new subscription. The process is simple, except you have to do it once to set up billing information for this device. There are no options to configure between different devices. This means that if you've got a Samsung Galaxy Tab S2, you're out of luck.
